From: [REDACTED], Chairman UKSport Research Advisory Group (RAG)

Date: 22nd January 2012

Project: [REDACTED]

Ethical Review: Generic protocol (revised). The effects of acute supplementation with a ketone ester on training and competition performance in Olympic sports: a repeated measures case study series

Thank you for your email of the 19th January. I have reviewed the latest version of the protocol, your response to the comments on the previous version and the associated paperwork. I can confirm that the RAG is happy to give ethical approval for the work to commence.

Please make sure each case study (annex) is sent to me for approval (Chairman's action) prior to the commencement of any new research with a particular sport under the generic protocol.

The RAG wishes the research team every success with this project.
